

## SafeCah Retail Deposit High Speed

Efficient and reliable cash deposit for retail

The SafeCash Retail Deposit High Speed system offers retailers a flexible and convenient deposit solution, allowing real-time monitoring of cash levels and pre-credit.

The solution is especially designed for stores that handle large amounts of cash. Bundles of up to 300 notes can be deposited into the machine at once before being automatically recorded and counted. The solution also features a module rejecting counterfeits.

Connected to the CIT and banks, the SafeCash Retail Deposit High Speed provides pre-credit and by monitoring real-time

cash levels, the CIT partner can be alerted when pick-up is due. Since the notes are deposited into a high-security safe in bar-coded seal bags, collection is quick, simple and secure.

Through identification, user details are also logged for complete transaction transparency and since the cash amounts can always be monitored, this eliminates any cash-counting discrepancies.

The SafeCash Retail Deposit High Speed relieves employees of cash-counting responsibilities and other back-office administration.

Efficient and reliable cash deposit for retail

## Configuration

For speed, bundles of up to 300 notes can be fed into the machine at once. The notes are instantly counted and a receipt for the amount deposited is printed.

For convenient CIT pick-up, the notes are sent straight into a seal bag which, uniquely for a deposit safe of this kind, is housed in a safe.

## Cash management and monitoring

The real-time cash level of each safe can be continuously tracked using Gunnebo's CashControl web-based monitoring software. This can either be hosted by Gunnebo or by the retailer, who may choose to run the programme locally or centrally.

Access to the system may be granted to CIT partners to help optimise route planning and pick-up times. Gunnebo service may also be connected to monitor the technical status of a series of machines so that maintenance and updates can be carried out before a problem occurs.

## Same day credit

As soon as notes are deposited, details of the amounts can be sent to the bank allowing the retailer's account to be credited that working day. (Note: This can only be done with the cooperation of a bank).

## High-Security Locking System

SafeCash Counted Deposit Unit is equipped with the GSL 1000 high-security electronic lock that can be used as a stand-alone unit, as a lock using one-time codes or as part of a network. It offers the management and the control of fleet of locks.

GSL 1000 electronic lock is approved by ECB•S and A2P (Grade B and C) and by Vds (class II and III).

## Benefits at a glance

- Improved cash management
- Less back-office administration
- Real-time monitoring of cash levels - better CIT service
- Pre-credit
- Complete transaction transparency - no cash discrepancies
