

Pioneering in Cash Handling

Efficient solutions for Retail

>> Pioneering in cash handling

With more than 35,000 cash handling systems installed, Gunnebo is a world leading manufacturer with systems that have become the industry standard in some countries. Our solutions come from experience gained through thousands of installations and expertise gleaned from many users. It all helps us understand our customers' needs, so that we can develop the optimal systems for your needs.

The No. 1 payment method

A study by the Deutsche Bundesbank indicates that 83% of all retail payments are still made in cash. This corresponds to about 60% of retail revenue, and no change in payment behavior is expected in coming years. Cash therefore remains one of the most important payment methods and provides customers and retailers with significant advantages:

- no fees
- direct revenue
- independence from customer groups
- anonymity

The challenges of cash handling

Security problems

As it gets harder to rob banks, post offices, armored transports, ATM machines and so on, robbers start focusing more on stores and malls. The trend is clear: in 2009, store robberies went up 25%. That's as much as it went up in 2007 and 2008 combined. Armed robberies make up for the majority of that increase.

Potential Tampering

Internal crimes, such as fraud and theft cost the retail industry millions a year. The number of undetected

cases is quite high, because the crimes often go undetected.

The high cost of handling

According to the EP Council, in 2010 cash handling cost about one cent per euro of revenue.

controlled and secure
retail cash handling.*

>> Pioneering in cash handling

Cost reduction through process optimization

To lower the cost of handling cash, the supply and disposal processes must be optimized. Automated cash handling is the most efficient choice and offers crucial advantages:

Better protection from unauthorized access

- Minimization of internal tampering
- Zero error rate when counting cash
- Considerable time savings through automated processes (counting, supplying cash registers, balancing registers)

*Solutions designed for
the retail world.*

Intelligent solutions for cash handling

Gunnebo offers a wide array of intelligent solutions for automating cash handling. Our systems comply with current regulations. The bank note modules are ECB approved, and the safes are ECB-S and VdS certified.

Regardless of whether your closed money flow begins right at the checkout registers, or you want to optimize your cash office, we have the solution for you. We work with you to design a concept tailored to your company, and we support you when it is time to implement the system and train your employees.

SafePay

The system offers your customers fast, uncomplicated cash payment for coins and bills, both at traditional cash registers and at self-checkout. Easily legible, high-resolution displays are simple to understand and guide the customer through the payment process. All transactions are recorded, eliminating out-of-balance registers. There is no more time-consuming cash processing at the end of the day. Transport containers with dye devices ensure maximum security on the way from the cash register to the back office.

SafeCash Retail Station

The most efficient solution for safely opening and balancing cash registers: Coins and bills are issued automatically by denomination to the cashier, as the customer wishes. Coins are delivered in separate compartments to make filling the register drawer easier. When it is time to close the register, bills and coins can be inserted without sorting. Checking, sorting and counting are done automatically before a receipt is finally issued.

SafeCash Retail Deposit

For the simplest cash transfer and storage, bills are deposited and automatically counted. Users identify themselves with a PIN. The device features intuitive touch screen navigation. Deposited sums are validated immediately after the transaction is concluded. We provide ports for further data processing in other IT systems upon request.

Cashcontrol Software

We have developed cash control software to help you manage our systems. It eases handling during routine business by helping with daily closing and by processing inventory queries. However, it also simplifies operating functions, such as monitoring status reports and recording all technical incidents. The software also allows configuration and software uploads. You have central access and an overview of all your stations — no more additional hardware at the branches. Access through a virtual private network (VPN) allows our service employees to perform remote maintenance through your networks. This can eliminate about 25% of all service trips. In the same way, you can also allow access for your bank or cash transport company.

Service

No one knows our systems better than we do. Therefore, Gunnebo maintains an extensive network of approximately 80 service technicians who can perform all installation, maintenance and repair work. Our service headquarters takes over control of all activities and simultaneously makes a technical hotline available. The Gunnebo service hotline is open seven days a week, from early morning to late at night. But we're not only there for you when there is a problem. With preventive maintenance, we increase your device's availability.

SafeCash Retail Deposit

Note deposit solution for improved cash management and same-day credit.

The Gunnebo Security Group provides efficient and innovative security solutions to customers around the globe. It employs 5 900 people in 29 countries across Europe, Asia, Africa, Australia and North America, and has a turnover in excess of €640m. Gunnebo focuses its offering on Bank Security & Cash Handling, Secure Storage, Entrance Control and Services.

We make your world safer.
