

Property & Evidence Storage and Transfer

Hamilton produces different types of lockers and safes used by federal and state law enforcement agencies, county sheriffs, local police departments and courthouses to securely hold evidence, property, documents and assets.

Storage Lockers and Safes

Your storage solution doesn't have to be a choice from a menu of 3 or 4 items. We can custom build to your needs! We make custom rotary depository safes for the DEA, storage cabinets for U.S. Post Offices, lockers to hold temporary items at courthouses and all different types of safes, single lockers and multi-compartment locker configurations for both temporary and permanent secured storage of property, evidence and documents.

Through-the-wall Secured Transfer Systems

We also manufacture Pass-through systems to allow evidence and assets to be transferred into a secured Property Room without having to enter the room. We offer single door property pass-throughs along with custom "In-the-wall" locker systems which have various sized secured lockers on the outside for police to tag and place evidence, and then one large access door to all lockers inside the Property Room...Evidence securely transfers into the Property Room
