

SafePay Deposit D11

Simplicity meets security in cash depositing

Imagine a simple and secure cash deposit system offering quick and easy installation designed with your business in mind. Every year, the number of cash transactions increases and business owners and managers require a more efficient cash-management process to manage them. Meanwhile, security risks are growing and businesses need to protect themselves from the costs and risks of robbery.

The SafePay Deposit D11 is a state-of-the-art solution designed specifically for the needs of your business. Focused on simplicity and security, the unit is ideal for point-of-sale and under-counter installations. This automated machine is so easy to use, your retail staff can complete routine deposits without supervision and feel safer thanks to less exposure of cash.

SafePay Deposit D11

Simplicity meets security in cash depositing

Flexibility and convenience for automated cash processing

Take advantage of the unit's plug-and-play system with its hassle-free installation and user-friendly interface that can get you fully operational in record time. Once installed, simply insert up to 30 notes at a time, which are instantly registered, counted, and deposited. With manual note counting and verification a thing of the past, you'll free up time to run and grow your business and save money on staffing costs.

Monitor your money in real time

Enjoy the convenience and flexibility of same-day credit. When your retail staff makes deposits, the amount registered is automatically credited to your bank account within the same business day. With Gunnebo's CashControl web-based monitoring software, you'll always know the machine's cash levels in real time, ensuring full transaction transparency at all times.

The choice is yours

Choose monitoring software that is hosted locally, centrally, by Gunnebo, or by your retail outlet. If you like, you can grant access to cash-in-transit (CIT) partners, greatly optimizing your planning and pick-up processes. Gunnebo's service center can also monitor your machines remotely to ensure ongoing maintenance and updates before a problem occurs.

Easy to Use and Service

Using a friendly user interface on an intuitive touch screen, SafePay Deposit D11 greatly reduces training time necessary for new users. In order to service the machine, a user will only need access to the front panel. Everything is readily accessible, except the cash stored securely within the unit, minimizing costly downtime without compromising security.

TECHNICAL DATA

Availability	24/7
Operation	free-standing frontload and service, staff operated
Note Acceptors	one
