

SafeStore Auto Midi

Self-service safe deposit boxes

SafeStore Auto Midi is a fully automated system of safe deposit boxes housed in a high-security vault. Customers are able to access this compact and flexible solution 24-hours a day through a secure room, which may or may not be located on the same level as the vault itself. SafeStore Auto Midi allows you to offer the most user-

friendly and convenient service possible, while giving your staff the freedom to perform more value added activities such as upselling or winning new customers. The accessibility and convenience of SafeStore Auto Midi offers a high tech, competitive advantage for financial institutions looking to update their solution offering.

SafeStore Auto Midi

Self-service safe deposit boxes

Concept

SafeStore Auto Midi is a fully automated system of safe deposit boxes with 24-hour availability. It is a compact, effective and flexible solution. SafeStore Auto Midi is delivered as a complete unit, quick to install in the lobby wall or free-standing. It does not need a pre-built vault and can be relocated to other sites upon request. In addition to the safe deposit box service, SafeStore Auto Midi can function as a transfer safe or deposit system for valuables. The intelligent transportation system guarantees short access times. Thanks to the system's advanced technology, next-level biometric security features, and 24-hour availability, SafeStore Auto Midi provides return on investment far sooner than manual, outdated safety deposit box alternatives.

Features

SafeStore Auto Midi offers unparalleled flexibility. With your choice of six different safe sizes and five box height arrangements, you can truly customize the unit to fit your needs. Thanks to horizontal and vertical mechanisms working simultaneously, customers experience a short wait time. Users enter the secure room using either a card or biometric fingerprint reader, and then navigate through a simple touch screen guide to access their valuables. From an administration perspective, the SafeStore Auto Midi can interface with our SafeControl monitoring software, hosted either centrally or locally. To provide even more security, SafeStore Auto Midi is contained within a special vault with Euro VII EX class walls. Additional security options include a high-security electronic lock for the safe, biometric authentication, and video surveillance. For installations requiring a smaller footprint, the SafeStore Auto Mini is available. To satisfy a larger customer base, SafeStore Auto Maxi is available.

Design

SafeStore Auto Midi has a modern, compact design allowing ample savings in physical space. As an innovative and flexible solution, the cassettes are dispensed at an ergonomic, user-friendly height from either the front of the machine or from above. Plus, the modular design enables SafeStore Auto Midi to be easily relocated to another site.

HOW IT WORKS

1. The customer passes a layer of security using a card or biometrics and is granted access to a secure room
2. The customer logs into the system using a bank card, PIN, and/or fingerprints
3. The system automatically and quickly delivers the customer's unit
4. The customer uses his or her personal key to access the contents
5. Once finished, the unit is quickly returned to its secure location within the vault
