Commstream 6000 SERIES VOIP AUDIO SYSTEM

The VOIP system consists of audio consoles and remote modules. Remote modules can be installed at each drive-up lane, entry/exit door, walk-up kiosk or anywhere that you want to communicate with your customers. Consoles are available in 8 channel and 16 channel versions. The 6001-LM (remote module) provides a connection point for the speaker, microphone, call button, vehicle detector and has an auxiliary relay that can be used to control various items.

Innovative Design Benefits

• TCP/IP

The Commstream 6000 audio system runs on standard TCP/IP networks and uses static IP addresses. Simply use a standard network switch to create its own freestanding network or use an existing local area or wide area network.

• Software Upgrades

Software upgrades are as simple as plugging in a USB Flash Drive into the 6000 Series Audio Console.

• Easy PBX Phone System Interface

• Easy to install and interface with PBX phone systems.

Features of Commstream VOIP Audio System

• Superior Audio

- Acoustic echo cancellation.
- Three levels of background noise cancellation.
- Crystal clear two-way digital audio.
- Runs on standard Cat 5 network cable.

• Priority Queuing

3 different customer priority queues are available in the system. Call Button queuing can be used alone or can be used along with either Vehicle Detection queuing or Send Button queuing.

• 3-Way Conferencing

3-way audio conferencing with the push of a button.

• 30 on 30 Configuration

The system can support up to 30 remote modules.

• Selectable Indicator Tones

Choose between 5 separate built-in indicator tones for call button, vehicle detection and customer send notification. The tones are independently configurable per console with independent volume selections. Custom tones can also be loaded into the console(s).

• All Cat 5 Wiring

Single cable connection. Each station requires only one Cat 5 cable and power.

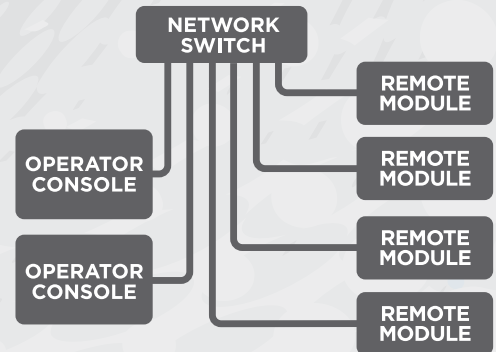

• Relay Output

The 6001-LM remote module has an auxiliary relay that is controlled by the console. The relay can be pulsed or held allowing for flexible control over various devices.

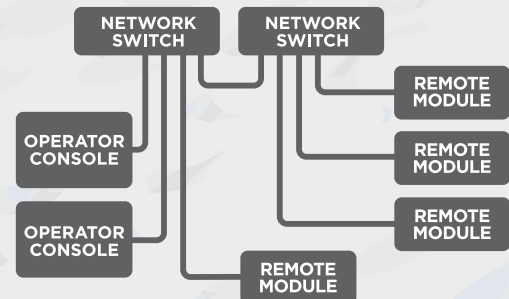

• Optional Vehicle Detector

6001-LM has a vehicle detector input which could notify bank personnel that a valuable customer has entered the drive-up lane.

Single Switch Network

Multiple Switch Network
